We will talk about how to determine the main mixing tasks of a process, how to determine key parameters and how to find the best-suited mixing system:

- Basic Mixing Tasks
- Viscosity and Rheology
- Blending, Suspending
- Heat Transfer, Mass Transfer
- Examples

Objectives

EKATO consults and accompanies its customers throughout their entire customer journey. Starting with the initial idea, through possible trials and subsequent scale-up into the industrial mixing process, to the actual mixing system - or even to the turnkey process plant.

In this webinar we want to give insight into mixing tasks and show examples of world-scale agitated reactors – select the optimum mixing system, with special regard to robustness and efficiency.

Target Group

General managers, process engineers, R&D specialists, production managers, buyers, project managers as well as anyone interested in process development, equipment engineering and production improvement.
